

ALPHA CENTAURI STUDIO

Adventurer!

Thanks for purchasing this pack :D

Here are some simple instructions for use.

If you already know how to do it, stop wasting your time here and go create something amazing.

These instructions are for the Unity engine, but should be similar for other engines as it is a common pattern in video games

1. Drag the contents into your game engine folder.
2. These characters, along with those in the ****Responsible Cats**** pack, which you can find here: [\[https://alphacentauristudio.itch.io/responsible-cats-pack\]](https://alphacentauristudio.itch.io/responsible-cats-pack), have been tested with freely available animations like Mixamo (not included in this pack).

3. Click on the cat and in the Inspector, in the Materials tab, click Extract Textures and Extract Materials. This will extract the necessary amount of texture to the cat.
4. In the eye image, set Alpha to Transparent, Wrap Mode to Clamp, and Filter Mode to Point.
5. Drag the texture to the albedo field for the cat material, and set the transparency to Cutout for the eye material. You can also lower the specular and reflection settings if they are bothersome in the same material tab.
6. Create an Animator Controller for the character.
7. And assign an Animator component to it (to the cat in the hierarchy), assign the created animator controller to said component.
8. and the avatar, you create it by selecting the cat in the directory and in the inspector, in the rig tab you select animation type as humanoid and apply.
9. Drag an animation to the selected animator in the Animator window for example "Idle".
10. Have fun! 🎮

📖 Quick License:

- You can use this asset in personal and commercial projects.
- You can modify it to suit your project.
- You may not resell or redistribute this asset as is (free or paid).
- Check out the [full license](#) in the PDF that also includes this pack.

If you have any suggestions, please write to us. We'd love to hear from you!
